

Android Developer - Competitive Salary + Benefits - Bury St Edmunds, Suffolk

The role

We are looking for a passionate Android developer. You will be working within a growing and supportive team of app developers, web developers, product and project teams. You will be working on a large white labelled application, supporting the growth of our business through continued enhancements but also large features and new technology additions to the product. You should be self motivated with an attention to detail. You are encouraged to be proactive and share your own ideas and opinions, and in turn receive constructive feedback and advice from more senior members of the team.

Key responsibilities of an Android Developer include, but are not limited to:

- Write high quality reusable, testable and maintainable Java code for Android
- Collaborate with other members of the development team
- Debug, diagnose and fix software related problems in developing and existing applications
- Follow the software development lifecycle and software development practices of the company
- Participating and conducting code reviews

The Company

The company head office is based in Bury St Edmunds, Suffolk, but also has offices in Warsaw, Poland and Los Angeles, USA. The company has clients in 23 countries and works with some of the world's most iconic properties. The candidate will be joining a team of other software professionals passionate about delivering the best possible products for their users.

The Person

The key skills and qualities of an Android Developer:

- Minimum 3 years of experience as an Android Developer
- BS/MS degree in Computer Science / Computer Science or related field
- Firm grasp of Android application lifecycle from coding to deployment
- Understanding of JSON, REST APIs, SQL (SQLite and/or ORMs), Source Control (Git)
- Data structures, algorithms and software design knowledge
- Excellent English and communication skills

Nice To Have

- Javascript and/or use of Webviews in Android
- Experience with writing Android applications using Kotlin
- Experience working with Jira and Bitbucket
- Firebase such as cloud messaging, crash reporting, analytics and performance monitoring.
- Experience in writing unit-tests / automated-tests for Android
